FreedoM-2-Manage Platform

## Centralized Access. Comprehensive Control. Agnostic Monitoring.

From monitoring individual SIM status and usage, to managing your entire base of varying M2M technologies, our comprehensive SIM and account management platform enables you to build your business without restrictions. FreedoM-2-Manage has been designed with all M2M applications in mind, and allows customers with multiple packages (eg. Single network, multi-IMSI and RPMA) to consolidate their device communications, offers comprehensive, interactive data analytics, and provides insight and control over individual SIMs, perfect for resellers or remote monitoring applications.
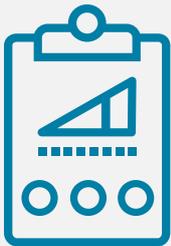

Our Diagnostics and Troubleshooting module has been designed by our in-house team of M2M experts to provide the most efficient support possible, and is now available to offer technical advice for the most commonly experienced issues. Our platforms also give you access to our API, enabling you to build apps linked to our platform on top of your current services.

Customer Benefits

Our comprehensive management and control platform is included with all SIM packages no matter their connectivity, so you can fully integrate your devices in every part of your business from one central location.

Insight into every aspect of your account with the Analytics module, and the ability to remotely change SIM status accordingly from your Dashboard (eg. one user with extremely high overuse).

A centralized and user-friendly interface that gives you the perfect overview of your SIM base and all the tools you could need in a simple and easily navigable format.

Our advanced SIM diagnostics and troubleshooting module can take care of the majority of support cases for the fastest possible solution, and our team of M2M/IoT specialists offer 24/7 support for all SIMs.

Complete Control

of your base of SIM cards, whatever their network connectivity, including applications that use non-cellular connectivity.

Instantly Diagnose

SIMs and get specialized troubleshooting advice, with expert 24/7 support in an emergency.

Advanced Analytics

module fully customizable to your parameters, with insight into all aspects of your account, from usage by bundle to countries and operators used.
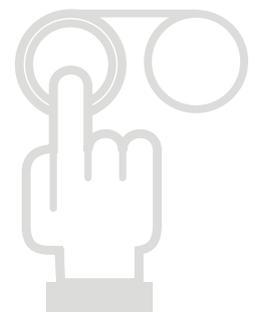

Integrate our Features

with your existing services using our API, enabling you to add apps to your site that link directly to our platform.
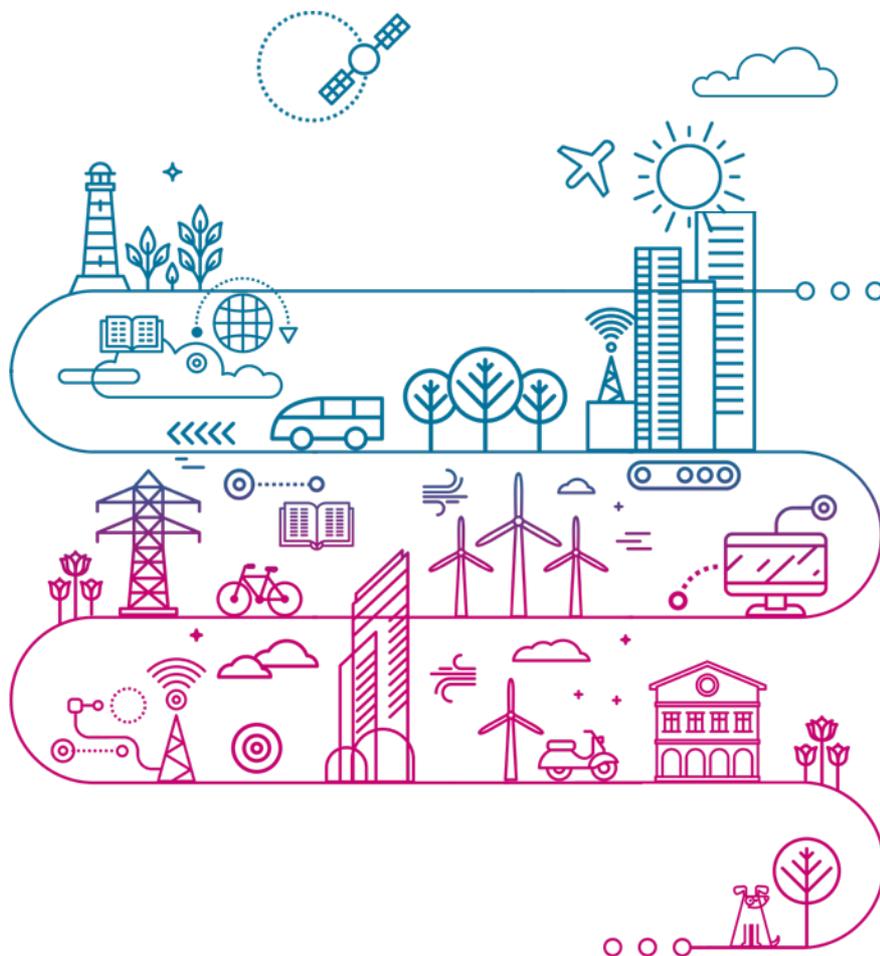

Try it for yourself, for free!

Register for a free demo account to test the features of our FreedoM-2-Manage platform for yourself before committing. Start a live chat today to talk to our staff and receive your demo account login details, and take control of your SIM base today.

Not what you were looking for?

Our management platform is also available under your company branding as a **White Label solution**, allowing you to offer connectivity as part of your solution and 'own' the customer from SIM to server. **The mobile app**, F2M Alerts, is a compact version of FreedoM-2-Manage that enables you to control your SIM base on the go.
