

## F2M Alerts App

**On-the-go SIM Management. Configure Alerts. Instant Notifications.**

Our F2M Alerts App gives you even more freedom than our Freedom2-Manage platform, enabling you to control your SIM base from wherever you are. Just as with the desktop version, the F2M App allows you to suspend and activate individual SIMs, configure limits for credit usage, and receive push notifications directly to your device when they have been reached.

You can send system SMS messages to your device to communicate without data, purge SIMs from the network

to refresh the connection or solve a connectivity issue, and raise a support request 24/7 with our specialist support team. The F2M Alerts App has been developed with all M2M applications in mind, allowing customers with multiple packages (eg. Single network, Multi-IMSI and RPMA) to consolidate their device communications, and gain insight and control over individual SIMs, perfect for resellers or remote monitoring applications.

## Customer Benefits

The efficient and intuitive platform interface is designed to streamline your account management on the move, with one click access to all SIM information.

Access your Freedom-2-Manage account wherever you are, with push notifications sent directly to your phone when preset limits have been reached.

Communicate with your SIMs even when they do not have a data connection, with the option to send a system SMS to your device.

Carry the support of M2M specialists with over 15 years of experience with you, by assigning support requests directly from your mobile device.

## Remotely Control

your F2M account, giving you authority over your SIM base even when in the field.

## Set Credit Limits

for individual SIMs, suspend and activate SIMs, and receive push notifications for the most convenient account access possible.

## Troubleshoot SIMs

with the ability to send system SMS messages independent of data connection, and purge SIMs from the network in case of connectivity issues.

## Receive Personalized Support

from our team of M2M experts who have in depth knowledge of your application's requirements, 24 hours a day, directly from your mobile device.

## Not what you were looking for?

**FreedoM-2-Manage**, our SIM and account management platform, gives you even more insight into your SIMs, with Analytics and Diagnostics added recently. FreedoM-2-Manage is also available as a **Whitelabel solution**, allowing you to offer connectivity as part of your solution and 'own' the customer from SIM to server.
