

APAC Multi-Network Solution

IoT connectivity, security and billing in one platform.

The Asia Pacific region is primed to become one of the largest industrial IoT markets. Such a huge base of devices combined with intense competition requires resilient connectivity, capable of communicating across borders securely. Pod's resilient connectivity solution gives you complete control of all aspects of your IoT application from one centralized platform.

Resilience

- Best signal, multi-network coverage on all APAC networks
- SIMs automatically swap networks if they lose signal
- New IMSIs can be sent to the SIM OTA to future-proof devices

Security

- Advanced network security suite for mission critical applications
- Rapid, cost effective VPN and traffic monitoring
- Direct connect and threat monitoring to maximize security on the network

Control

- Centralized management of connectivity via one platform
- Integrated network security monitoring
- Hierarchical billing platform to speed time to market and generate recurring revenue

Support

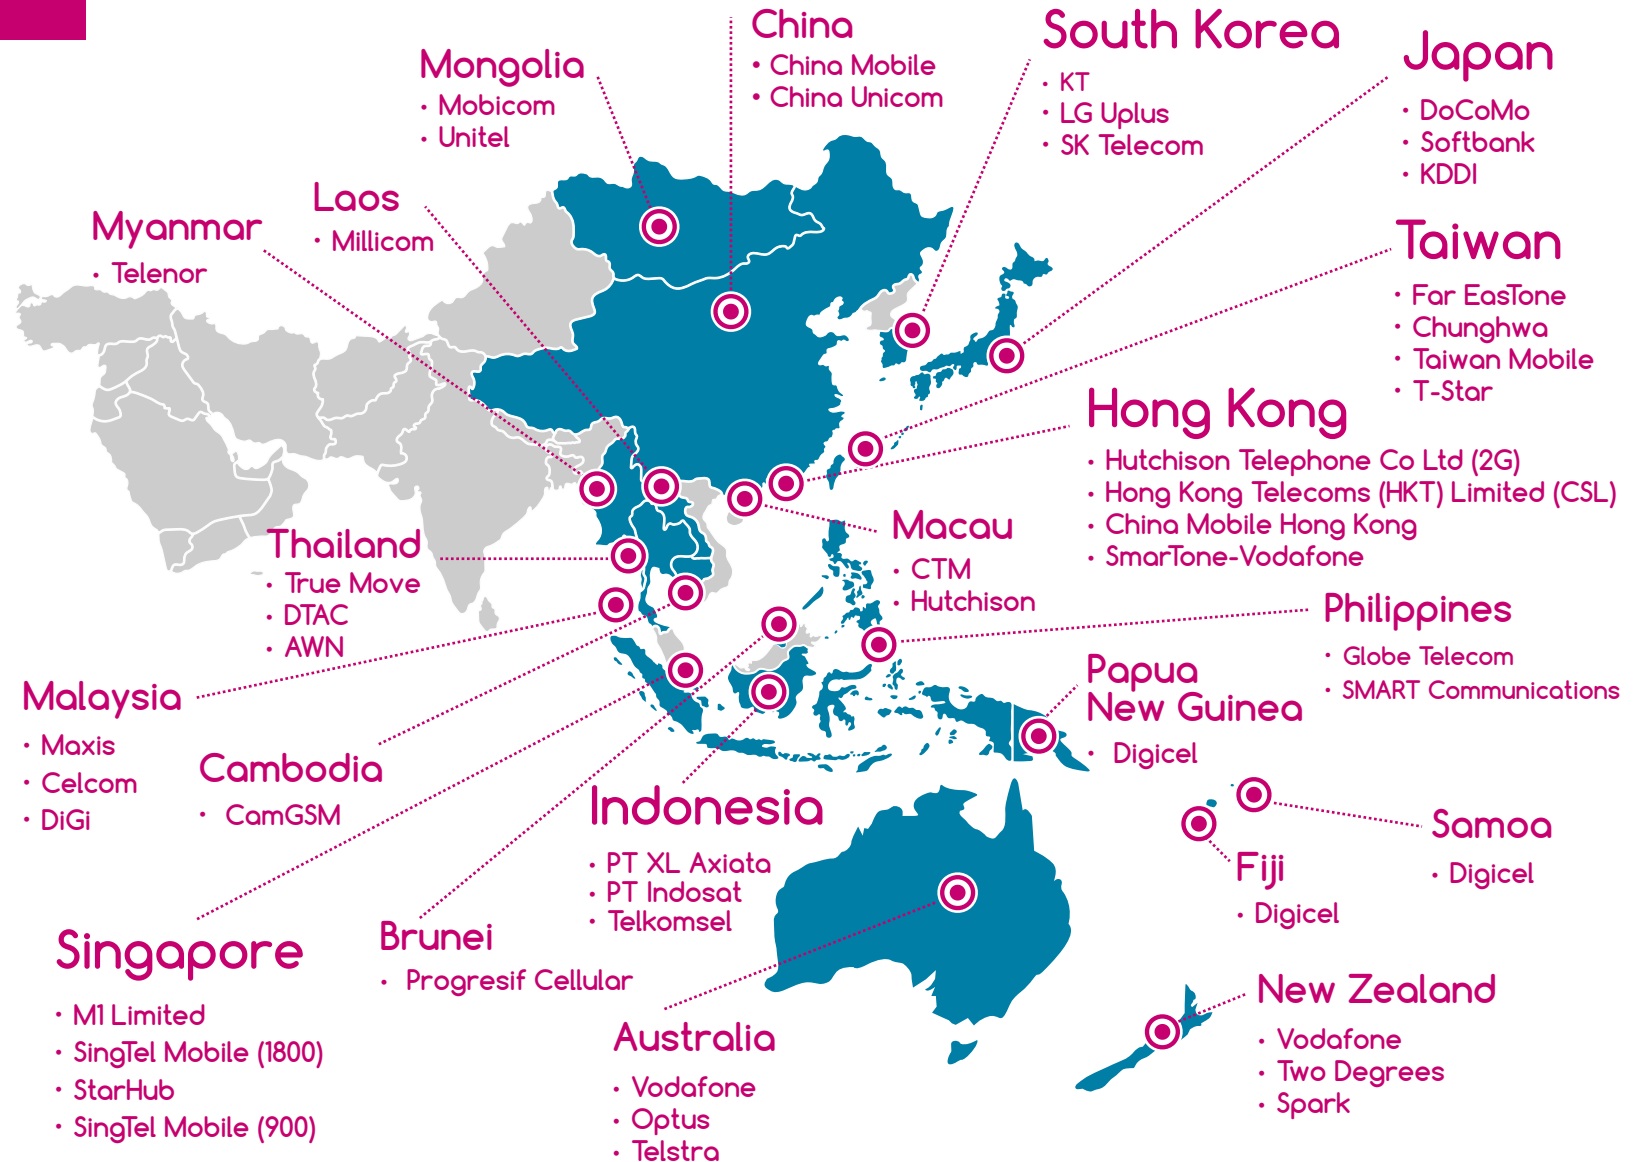

- Personalized 24/7 technical support from a multi-lingual team of IoT experts
- In-house development team and systems engineers for quick solutions to technical problems
- Instant advice and practical solutions relevant to your application

Coverage map

High performance data SIMs across the Asia Pacific region

Pod's experience providing connectivity for remote and mission critical devices since 1999 means we offer the widest range of networks in the APAC region, with every network covered. You benefit from simple, fast, large scale deployment with 24/7/365 support from IoT experts.
